Dual Cable Latch

This document outlines the proper procedure for operating the Dual Cable Latch on a TrailerTail® Trident.

1. Close TrailerTail® to engage main latch.

2. Hook the loose carabiner to the Footman Loop on the outside of the Lateral Panel.

- The secondary cable latch should be used whenever the trailer is the front trailer (Trailer A) of a Long Combination Vehicle configuration.
- The usage of the cable latch is mandatory in this scenario.
- Not using the secondary cable latch will cause damage to the TrailerTail® when the AutoDeploy™ system deploys the TrailerTail™.

Secure secondary cable latch to prevent automatic deployment.
