PLATINUM PERFORMANCE SYSTEM™

SYSTEMS APPROACH TO PERFORMANCE

On their own, STEMCO® wheel end components are among the lightest, most durable and highest performing in the industry. Bundled together in a Platinum Performance System™, they work together to create the most reliable and efficient wheel end systems possible. With up to 7-year warranties, Platinum Performance Systems provide unrivaled confidence and peace of mind.

Warranty

From three to seven years, depending on the chosen system. Available for OEM and aftermarket applications.

Reduced Downtime

Exceptional reliability means trucks spend more time on the road and less in the shop.

Lower Operating Costs

Extended service life and warranty coverage reduce life-of-equipment costs.

Lightweight

STEMCO Platinum Performance System Plus 7 Light Weight removes up to 150 pounds of trailer weight, dramatically increasing payload capacity.

Improved Fuel Efficiency

Light Weight and Tire Inflation Platinum Performance Systems help reduce fuel costs.

Increased Revenue

Greater payload capacity, reduced maintenance, and industry-leading warranties all lead to greater profit potential.

PPS SOLUTIONS PROVIDE THE INDUSTRY'S BEST WARRANTY

Platinum Performance System™ solutions provide exceptional performance and reliability, but it's their warranties that provide peace of mind for fleet owners and managers. And the more innovative STEMCO® products that are added to the package, the longer the warranty and the greater the peace of mind.

AFTERMARKET PACKAGES

STEMCO's Aftermarket Platinum Performance System solutions are an integrated system of wheel end products and performance. With the Platinum Performance System™, extend wheel end coverage to a three- or five-year limited warranty with unlimited mileage for tractors and trailers.

PLATINUM PERFORMANCE SYSTEM™

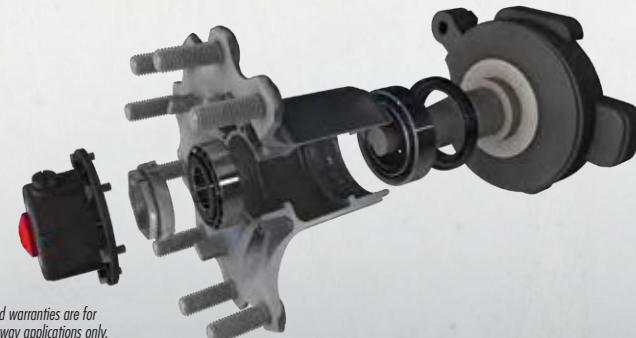

- Guardian® HP or Discover® Seal
- Pro-Torq® or Zip-Torq® Axle Fastener
- Defender™ Sentinel® or Sentinel® Hub Cap
- STEMCO Bearings

3 Year

PLATINUM PLUS PERFORMANCE SYSTEM™

- Guardian® HP or Discover® Seal
- Zip-Torq® Axle Fastener
- Defender™ Sentinel® Hub Cap
- STEMCO Bearings

5 Year

*Extended warranties are for On Highway applications only.

OEM PACKAGES

The unprecedented performance of these STEMCO Platinum Performance System Plus solutions will lower maintenance costs by reducing down-time and protecting wheel end components. Choose our five-year Plus package, or add additional STEMCO components and extend the limited parts and labor warranty to seven years.

PLATINUM PLUS 7 PERFORMANCE SYSTEM

LIGHT WEIGHT

- STEMCO CentriFuse® Drum and Hub Assembly
- STEMCO Crewson™ Automatic Brake Adjuster
- Guardian® HP or Discover® Seal
- Pro-Torq® or Zip-Torq® Axle Fastener
- Sentinel® Hub Cap
- STEMCO Bearings

*Extended warranties are for On Highway applications only.

PLATINUM PLUS PERFORMANCE SYSTEM™

- STEMCO Crewson™ Automatic Brake Adjuster
- Guardian® HP or Discover® Seal
- Pro-Torq® or Zip-Torq® Axle Fastener
- Sentinel® Hub Cap
- STEMCO Bearings

7 Year

ADDITIONAL WARRANTY COVERAGE

If STEMCO new or relined brake shoes are used in conjunction with the Platinum Performance System, lined shoes that have been exposed to oil contamination will be covered or replaced. For STEMCO brakes not covered by the PPS System, the length of the lining warranty against oil contamination will be the warranty period of the STEMCO seal. STEMCO Aeris Automatic Tire Inflation System is also available with a three year aftermarket warranty.

Guardian® HP

LONGER LIFE FOR THE LONGEST HAUL

The Guardian® HP incorporates the best features for preventing the leading causes of seal-life degradation—contamination ingress and heat generation.

Technologically Advanced Seal

With its high-performance sealing lip and superior contamination exclusion, Guardian HP has been developed for extra protection and greater sealing. The rubber outer diameter allows for faster hub cleaning with less corrosion damage to the hub.

Single-Step, Error-Proof Installation

Installation directly on the axle, rather than the hub bore, ensures positive alignment every time. No tool impact on

the seal means no damage or installation-related failures. Plus, Guardian HP is easy to remove and service, so there's no opportunity for bearing damage during seal removal.

Trailer and Axle OEM Standard Seal

With over 25 years of proven success, Guardian HP is the OEM seal of choice in the heavy-duty trailer industry. The enhanced seal features offer improved cost-per-mile performance in addition to simple, one-step axle installation.

DISCOVER® HIGH PERFORMANCE AND REVOLUTIONARY DESIGN

UNITIZED DESIGN, UNWAVERING PERFORMANCE

STEMCO® Discover® Seals feature a high-grade temperature-resistant material and multi-labyrinth sealing features for long-life applications.

Have Complete Confidence During Installation

Discover seals' piloted entry allows an easy and square installation every time. The ridged double wall steel case is the impact point for the tool head, maintaining the seal's internal geometries.

Strong Locking and Easy Removal

The Discover seal consists of a bonded, ribbed rubber OD and ID for easier removal without special tools, yet STEMCO's patented "SMART" anti-rotation features ensure positive positioning and locking of the seal to the spindle.

Lengthen the Life of the Seal

The premium sealing element is protected by a four-zone labyrinth that provides unmatched contaminant exclusion and performance.

Extended Warranty Component

Install the Discover seal with STEMCO's other premium wheel end components to experience the Platinum Performance System™. This system combines the Discover or Guardian® HP seal, the Pro-Torq® or Zip-Torq® nut, and the Sentinel® hub cap for a three-year warranty.

STEMCO DISCOVER VS. COMPETITOR SEALS

Listed by main sealing lip material. Hours shown are accelerated lab life test hours.

DISCOVER SEAL DESIGN FEATURES

Bonded rubber OD offers easy installation with piloted entry

Rugged, modular design avoids installation damage

Patented smart anti-rotation ID locks onto the axle

High temperature elastomeric co-polymer sealing element incorporating hydrodynamic pumping features

Four-zone labyrinth provides unmatched contaminant exclusion

Voyager®

REVOLUTIONARY HUB-INSTALLED, UNITIZED SEAL

The Voyager® wheel seal is designed for regional route trucks, city traffic and coach applications. Rugged design, simple installation and proven performance make Voyager the right choice for fleets seeking a superior seal for everyday stop-and-go traffic environments.

Simpler, Quicker Installations

A bonded rubber OD and piloted entry ensures an easy and square installation.

Superior Seal

A ribbed rubber OD forms a superior seal between the seal case and the hub bore without needing additional sealant.

Reduce Contamination

A four-zone labyrinth system excludes waterborne and airborne contaminants.

Avoid Installation Damage

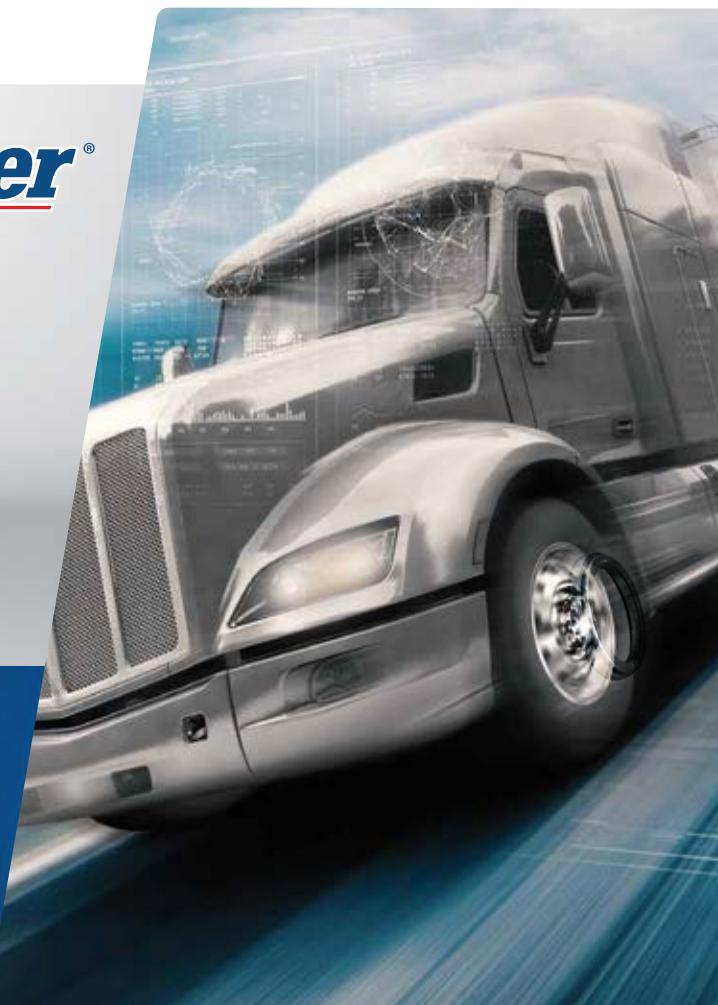

Thick-wall steel construction allows positive hub installation without seal warping or bending.

Increase Reliability

The temperature-resistant polymer with hydrodynamic pumping keeps the lubricant in place.

Easy Removal

Bonded rubber ID and OD allow for easier removal while anti-rotation features lock the ID surface in place.

Temperature-resistant polymer with hydrodynamic pumping features

TYPE L1

TYPE L2

GRITGUARD®

SUPERIOR SEALING IN SEVERE APPLICATIONS

Engineered for exceptional performance, durability and contaminant exclusion in severe service applications, the STEMCO® Grit Guard® hub seal features a two-piece design that reduces maintenance and unnecessary wear on expensive spindles.

Spindle-Mounted Deflector Ring

Provides new surface for sealing lip; compensates for worn or damaged spindles.

Metal Case Seal

Exceptional durability; provides metal-to-metal press fit between seal and hub.

Blue Bore Sealant

Applied to case seal; prevents minor seepage between the seal and hub.

Elastomeric Leather Sealing Lip

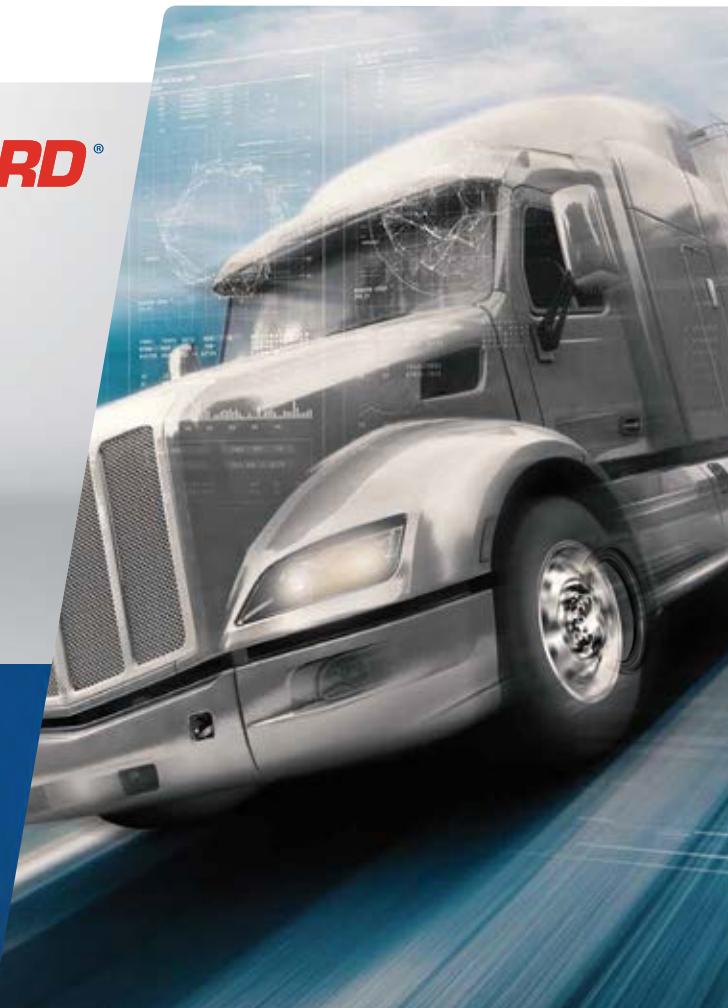

Rotates on deflector ring for improved heat dissipation; remains flexible and durable in the most grueling environments.

Dust Shield

Built into deflector ring; creates an additional level of dirt and contaminant exclusion.

Severe-Service Performance

Designed for rugged, severe-duty applications that exceed the capabilities of other seals.

NOTES

 Trifecta™

RAISING THE STANDARD FOR WORLD-CLASS WHEEL ENDS

STEMCO's Trifecta™ Pre-Adjusted Hub Assembly combines premiere STEMCO wheel end technologies with the trusted Webb® hub in a single, pre-adjusted assembly, ensuring a faster and more secure installation.

Trifecta eliminates the need to purchase, install and adjust separate wheel end components and fasteners while guaranteeing reliability.

Safety

Provides quick, easy installation with a simple torque-down procedure and no bearing adjustment.

Includes Zip-Torq® axle fastener featuring a unitized design with no additional clips, keepers, snap rings or screws, increasing simplicity for technicians.

Performance

Trifecta includes the Discover® XR, a high-performance seal with patent-pending GlideLock™ technology which essentially eliminates installation issues by reducing installation force by 50% with no pre-lube required—an industry first.

Discover XR and the Defender ESP™ hub cap combine to set a new standard for contamination exclusion and raise the bar for long-life wheel end systems.

Confidence

Features industry-standard components manufactured by STEMCO & Webb Wheel.

Backed by STEMCO support nationwide, including on-site training and certification, TMC-approved procedures and a 5-year/500,000 mile parts and labor OEM warranty.

SIMPLE INSTALLATION. TOTAL PEACE OF MIND.

Designed for fleets that value component longevity between service intervals and keeping time in the service bay as brief as possible, the Trifecta™ hub assembly represents the peak of durability and simplicity—the toughest, most resilient wheel end components united in an easy-to-install package.

STEMCO Manufactured Bearings

- Exceed ABMA performance and durability standards
- Included in OEM long-life wheel end systems

Defender ESP™ Hub Cap

- Made from high-strength composite material
- 100% corrosion-free
- ESP (Extended Service Plug) prevents contamination from entering, protects lubricant integrity

Zip-Torq® Axle Fastener

- Simplified, one-piece advanced axle fastener provides fast and simple installation
- Self-ratcheting feature prevents back-off
- No clips, keepers or set screws to install
- Easy removal

STEMCO Spacer (patent-pending)

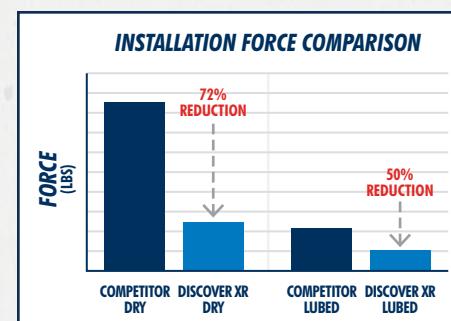

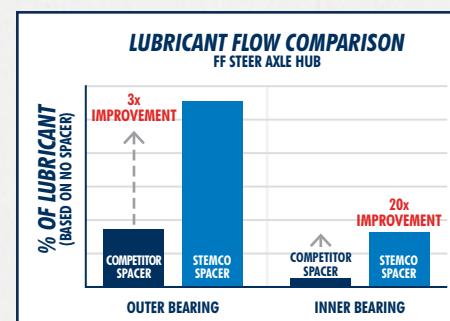

- Designed for optimized lubricant flow
- Reduces fretting corrosion between spindle and bearing mating surfaces
- Extends spindle, bearing and seal life

Webb® Wheel Hub

- Industry-standard hubs
- Precision machined for Trifecta™
- Ductile iron & aluminum options available
- Over 70 years of hub expertise

Discover® XR Wheel Seal

- High-temperature, long-life seal
- 4-zone labyrinth and slinger provide unmatched contamination prevention
- GlideLock™ patent-pending technology reduces installation force by 50%—no pre-lube required
- Addresses industry's leading seal failure modes—cocked seals and excessive heat generation

HEAVY DUTY BEARINGS

UNRIValed PERFORMANCE, UNBELIEVABLE VALUE

Bearings are at the heart of commercial trucking. Inferior quality can cost far more than the money it saves. STEMCO® heavy-duty bearings deliver unmatched quality and reliability and are part of our promise of Making the Roadways Safer®.

State of the Art Manufacturing

We design and manufacture all of our bearings, ensuring unparalleled reliability and a product that meets or exceeds ABMA specifications for bearing life.

Expanded Bearing Coverage

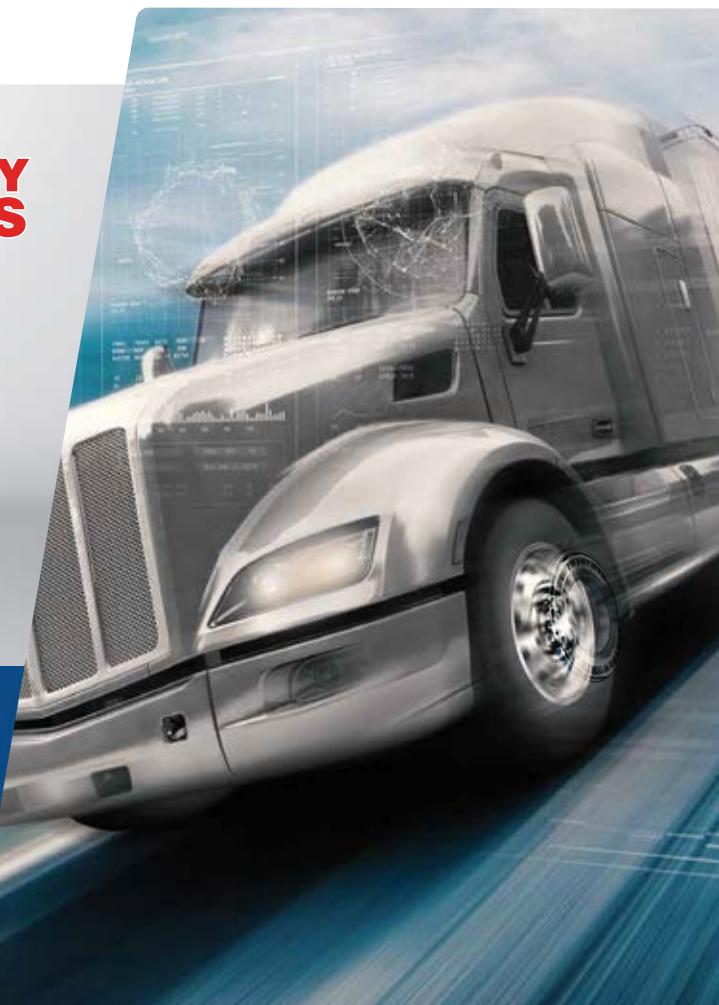

We offer tapered roller bearings, radial ball bearings, clutch release bearings, individual cups and cones and matched bearing sets.

Long Life Warranty

STEMCO offers a 3-year aftermarket limited warranty when used in conjunction with our Platinum Performance System™ or up to a 7-year OEM warranty with our Platinum Performance System™ +7 (PPS+7).

Trusted Quality

Innovative designs paired with exceptional manufacturing systems and a commitment to roadway safety make STEMCO a trusted, reliable wheel end component supplier.

SENTINEL®**EXCEPTIONAL PROTECTION FROM THE ELEMENTS, GUARANTEED**

Sentinel® Hub Cap technology provides an unmatched filtering system to eliminate contamination from dirt, dust, sand and water, all while making it easy to visually monitor lube levels. Featuring an innovative design and durable construction, Sentinel hub caps help extend equipment life, reduce maintenance and increase profitability.

Sentinel Hub Cap

Provides a tamper-proof hub cap system for maximum protection and maintenance-free performance.

Sentinel ESP (Extended Service Plug)

Allows Sentinel Technology to be retrofitted on existing wheel ends with drive axle plugs or aftermarket plugs.

World Class Innovation

The only water proof hub cap in the industry.

**Versatile**

Order OEM or retrofit in the aftermarket on a trailer, drive or steer axle.

A Corrosion-Free Option

STEMCO Defender™ hub caps with Sentinel Technology are made from composite materials with stainless steel reinforcement inserts that will not corrode.

SENTINEL®: KEEPING WATCH OVER WHEEL ENDS

- Prevents dirt and water from contaminating the oil, thereby extending seal and bearing life.
- Dramatically reduces contaminant build-up on hub cap windows, allowing for an accurate determination of lube levels.
- Eliminates early oil breakdown by preventing water contamination as a result of submerged axles.
- Provides maximum protection for maintenance-free wheel end systems.
- Improves performance and lowers overall maintenance costs.

To relieve vacuum, the Sentinel interior check valve lifts slightly, drawing air into the wheel end through the water-resistant filter. The duck-bill check valve remains closed, blocking dirt, grime and other contaminants from entering.

To relieve pressure, the duck-billed pressure relief valve opens, allowing pressure to vent out. The umbrella check valve remains closed, stopping lubricant from leaking out and contaminants from flowing in.

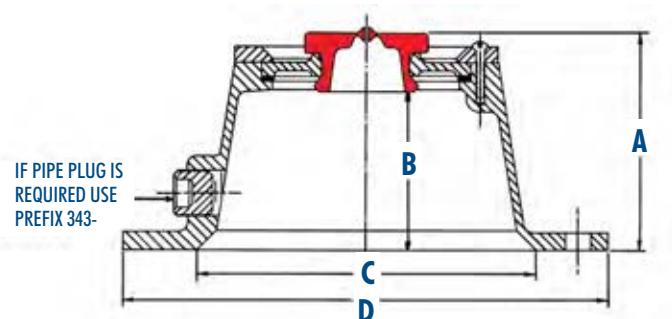

A second O-ring increases plug retention.

HUB CAP SPECIFICATIONS

BOLT-ON HUB CAPS BY BOLT CIRCLE

How to Determine Bolt Circle

Count the number of mounting holes; measure diameter of bolts; measure bolt circle (select 2 holes opposite each other and measure from the center of one bolt to the center of the one opposite). On odd number holes, measure inside diameter of hub and add twice the distance from the bore to the center of bolt hole.

BOLT CIRCLE	BOLT SIZE	NO. OF BOLTS	A HEIGHT	B INSIDE DEPTH	C FLANGE I.D.	D FLANGE O.D.	HUB CAP INCLUDES GASKET	GASKET NUMBER

NOTES

DATATRAC® PRO

**DataTrac®
PRO**

PROFITABILITY THROUGH PRECISION

Programmable to the exact dimensions of over 2,500 tire models, the DataTrac® Pro hubodometer and programmer set the standard for precise mileage counting, enabling simplified inventory, more timely maintenance and unparalleled billing accuracy.

Maintenance Scheduling

Perform maintenance based on actual mileage rather than time between services, reducing the potential for unnecessary downtime or component failures.

Simple Data Retrieval

Large, easy-to-read LCD display automatically positions numbers upright for easy mileage verification. Optional trip and life readings.

Compact Size

Easy to mount and dismount tires without removing unit from the wheel.

Durable

No moving parts provides the ultimate in reliability in the most demanding applications. Unique serial numbers provide extra security and data control.

- Scheduling maintenance
- Determining lease charges
- Validating guarantees
- Calculating costs-per-mile

* Indicates the revolutions per mile or kilometer used to program the DataTrac® Pro from the Program Part screen.

* DataTrac® p/n 600-1xxx used for miles and 600-0xxx used for kilometers contain trip. Follow conversion from DataTrac® in the table above.

* Mechanical hubodometers are designated for use in a "range" of RPM or RPK, not a "specific" RPM or RPK. For "exact" revolutions, use DataTrac® Pro.

PRODUCT PART NO.

DataTrac® Pro	600-9999
Programmer	801-6000

CALIBRATION AND INSTALLATION

STEMCO calibrations are based at the mid-life of the tire tread (not the depth of new tire tread), one more reason we can guarantee +/-2% accuracy over the life of the tire.

All that is needed for proper calibration is the tire make, model and size. Refer to the chart for some of the most popular tires.

Hub caps, hub cap mounts and universal brackets are available for all popular makes and models. For quick and easy installation, use any of three different options: (1) aluminum hub cap with hubo window, (2) Grilamid® Hubodometer hub cap or (3) bracket.

WARRANTY

STEMCO DataTrac® Pro is warranted for 500,000 miles or 4 years when installed in accordance with its specifications.

CONSTRUCTION AND DESIGN

HUBODOMETER®

SUCCESSFUL BUSINESSES
RUN ON INFORMATION

Getting ahead in the trucking industry requires accurate, reliable information, and nothing delivers it like the STEMCO® Hubodometer®.

Featuring an innovative design, built with military-grade materials and backed by a confidence-inspiring warranty, the Hubodometer helps ensure productivity and profitability through superior data.

Multiple Uses

Schedule maintenance, determine lease charges, validate guarantees, calculate costs per mile, and more.

Versatile

Hubodometers are calibrated to perform on over 2,500 specific tire models and sizes.

Accurate

Spring-loaded counterweight helps eliminate spin when tires hit bumps and potholes, for greater accuracy.

Preset Options

Hubodometers can be preset to collect customized mileage data.

Durable

High-quality components, rugged construction and innovative design stand up to demanding road and weather conditions.

Maintenance Efficiency

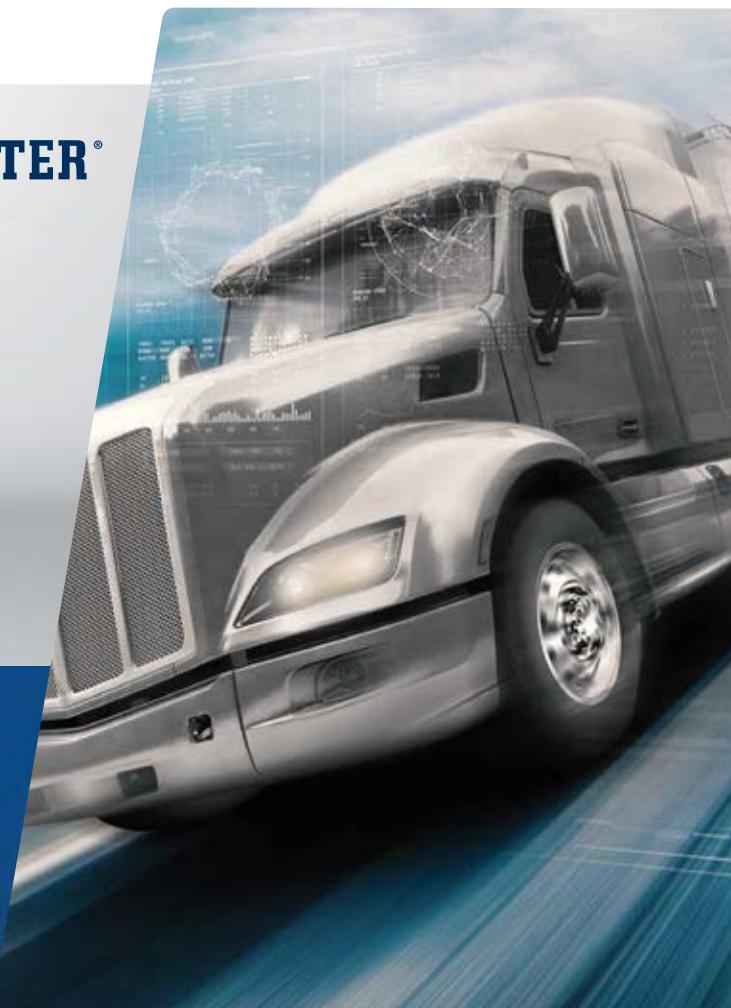

Better tracking enables optimized maintenance scheduling and adherence to best practices.

Mileage Limits

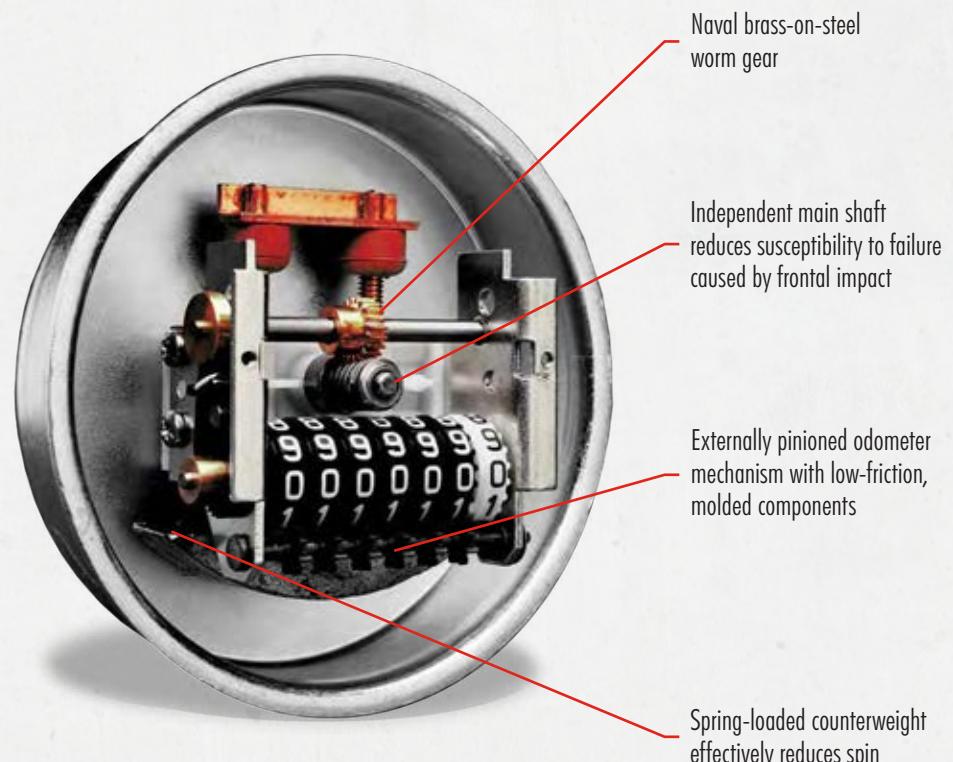

Highly accurate mileage tracking allows rental and lease fleets to operate with complete confidence.

Guaranteed

Backed by warranty, ensuring accuracy for up to 500,000 miles.

- Main shaft is independent of front cover, greatly reducing failure caused by frontal impact.
- Unit is sealed in a moisture-controlled environment for added durability.
- Nine permanently lubricated bronze bearings reduce wear and ensure long life.
- Worm drive rotates parts less frequently, reducing wear.
- Rugged construction. Naval brass on steel. No plastic drive components.
- Meets California and New Zealand requirements.

CALIBRATION
AND INSTALLATION

STEMCO calibrations are based on the mid-life depth of tire tread (not the depth of new tire tread); one more reason we can guarantee ±2% accuracy over the life of the tire.

For proper calibration of any STEMCO Hubodometer, only tire make, model and size are required. With this information and our Tire Classification catalog (which includes radials and low-profile tires), any user can quickly determine the part number for the correct Hubodometer.

STEMCO also offers a preset Hubodometer program at a nominal cost. Preset orders are shipped within 3 working days from our warehouse in Longview, Texas. For more information, contact STEMCO Customer Service.

WARRANTY

The STEMCO Hubodometer is warranted for 500,000 miles when installed in accordance with its specifications. See a STEMCO distributor for details.

PRO-TORQ® AXLE SPINDLE NUTS

PRO-TORQ®
ADVANCED AXLE SPINDLE NUTS

UNRIValed PRECISION AND SERVICE LIFE

Increase tire life and reduce premature wheel seal failure with the proven performance of the Pro-Torq® axle spindle nut. With back off increments down to 0.001 inch and exacting cup and cone alignment on the spindle, nothing compares to the reliability and precision of Pro-Torq.

Increased Tread Life

Controls axial motion, holding bearing end play near zero for longer tread life.

Precise Bearing Adjustment

Minimizes premature seal failure and improves seal and brake lining programs.

Compensates For Wear

Allows 0.001 inch back off increments to keep bearings aligned, running cooler and lasting longer.

Improves ABS

Helps ensure accurate wheel-speed monitoring on anti-lock braking systems.

Single-Nut Design

Eliminates potential for overtightening the jam nut and pushing the outer bearing cone out of position.

Easy to Install

Only one nut means less time wasted trying to reposition multiple-nut assemblies.

PRO-TORQ ADVANCED AXLE SPINDLE NUT DESIGN FEATURES

Superior Wear Resistance

Bearing contact surface is induction-hardened. No washers required.

Highly Visible Adjustment Marks

Give technicians precise control of nut back off amount during installation.

Infinite Locking Positions

Nut and spring-steel keeper mate and lock at any point on the axle spindle in 0.001" axial increments.

COST-SAVING INSTALLATION

For more than 20 years, leading fleets have chosen Pro-Torq to deliver the longer service life they expect from today's tires, wheel seals and bearings. Pro-Torq minimizes wheel-bearing adjustment variability, providing extended maintenance intervals and trouble-free performance from steer, drive and trailer axle wheel ends.

TIGHT BEARING ADJUSTMENT CONTROL

Pro-Torq gives fleets the ability to standardize wheel end maintenance practices and makes repeatable, close-tolerance bearing adjustment a reality. From technician to technician, when the Pro-Torq 2-1-1 adjustment procedure is followed, wheel-bearing end play adjustment of 0.001-0.003" can be accurately achieved.

Pro-Torq avoids the extremes of preload and excessive bearing end play, giving fleets the tightest adjustment standard in the industry.

FASTER TO INSTALL, EASIER TO LOCK

Pro-Torq assures bearings are precisely and positively locked in position the first time, because with Pro-Torq there is no jamming, juggling, or wasting time working with multiple-nut assemblies. That's because Pro-Torq uses only one nut.

Clearance in the threads of traditional jamming-type nuts can result in a wide range of final settings. Technicians can unintentionally impose preload on a bearing by over-tightening jam nut systems.

As a result, the outer bearing cone can be pushed further up the spindle and out of its intended position.

Pro-Torq takes the guesswork out of bearing adjustment!

THE NEW STANDARD IN AXLE FASTENERS

THE NEW STANDARD
IN AXLE FASTENERS

Zip-Torq® is the latest STEMCO innovation designed to make the roadways safer. With its robust single piece design, Zip-Torq takes the guess work out of bearing adjustment.

Simplified & Fully Unitized Design

Single piece design allows installation without special tooling. No clips, keepers, snap rings, or screws to install.

Prevents Back Off

Integrated locking mechanism prevents back off.

Secure Adjustment, Easy Removal

Cannot rotate nut by hand after wheel-end adjustment is complete. After locking mechanism disengages, one can remove by hand.

Consistent Endplay

2-1-1 adjustment provides consistent endplay measurement between .001" – .002" to meet TMC recommendations (.001" – .005").

Highly Compatible

Zip-Torq is compatible with most automated installation equipment, so there's no need to purchase new equipment.

Extend Warranty

Zip-Torq is offered with STEMCO PPS+ programs, to allow one to package wheel end products to get the best warranty in the industry.

Install With Confidence

STEMCO offers installation videos and manuals online – available in the STEMCO app and on the website.

HOW DOES ZIP-TORQ WORK?

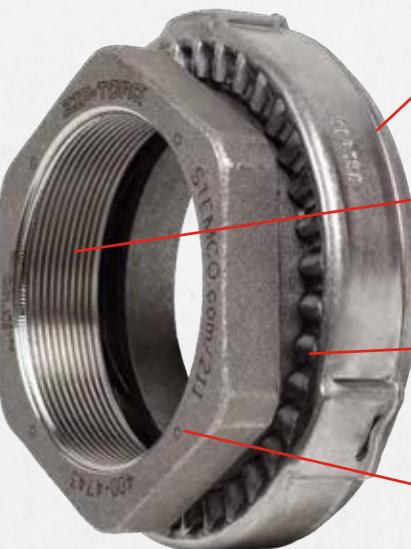

The STEMCO Zip-Torq axle fastener is the latest innovation from STEMCO. Zip-Torq is a unitized spindle nut that uses a patented self-locking ratchet system to secure the wheel end and prevent back off. Zip-Torq consistently delivers accurate endplay between .001"–.005" using the STEMCO 2-1-1 method.

EASY & FAST INSTALL

Installation time of the Zip-Torq is the same or faster than Pro-Torq®, reducing time in the shop.

LEARN MORE ABOUT 2-1-1
INSTALLATION INSTRUCTIONS

See detailed Zip-Torq installation instructions at www.stemco.com/211

ZIP-TORQ FEATURES

Superior Wear Resistance

Bearing contact surface is induction hardened. No washers required.

Improved Threads

Zip-Torq engages twice as many threads to firmly seat and lock wheel bearings securely.

Infinite Locking Positions

Nut and spring steel keeper mate and lock at any point on the axle spindle in .002" axial increments.

Highly Visible Adjustment Marks

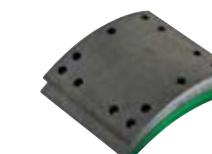

Give mechanics precise control of nut backoff amount during installation.

STEMCO BRAKE SHOES ARE A BREAKTHROUGH IN PERFORMANCE AND PROTECTION

HORIZON SP®

Value & Performance

Horizon SP® is the standard-performance friction formulation for normal-duty cycles, operating environments and loads.

AXLE RATING	APPLICATION(S)
Horizon SP20® 20,000 lbs.	
Horizon SP23® 23,000 lbs.	

CREST XL®

Long-Lasting for the Long Haul

Crest XL® is perfect for moderate- to heavy-duty long-haul applications.

AXLE RATING	APPLICATION(S)
Crest XL® 20,000 lbs.	

VISTA HP®

Prepared for Any Challenge

Vista HP® offers smooth, noise-free and stable stopping power over a wide range of temperatures, pressures and speed variations in demanding applications.

AXLE RATING	APPLICATION(S)
Vista HP® 23,000 lbs.	
Vista HP1® 25,000 lbs.	

ULTRA PEAK®

Low-Noise & High-Quality

Ultra Peak® has been specially formulated to run quieter and extend lining life and drum life with excellent flexural strength, which eliminates mode-of-friction cracking.

AXLE RATING	APPLICATION(S)
Ultra Peak® BRT 23,000 - 26,000 lbs.	
Ultra Peak® FT 26,000 - 29,000 lbs.	

HIGH-PERFORMANCE BRAKE LININGS

E-COATING

Electrical current deposits ("bonds") the paint to the shoe, which helps to resist rust jacking. STEMCO Brake Products™ shoes are environmentally tested to withstand 1,000 hours of salt spray.

OEM QUALITY, SAFETY & DEPENDABILITY

Meets TMC specification (RP 605B) for table condition and minimum thickness, avoiding lost braking power, friction cracking, loose rivets and/or rust jacking.

PRE-FORMED "ROLLED" TABLES

STEMCO pre-formed tables provide a flatter mating surface for brake lining and stress-free welds. Competitors form and weld tables in the same step, and then use a process known as "coining" to shape the welded shoe, which may cause weld stress.

*OEM replacement shoes have heat-treated roller ends. Heat-treated roller and anchor ends available on select shoes, which are offered on a special-order basis.

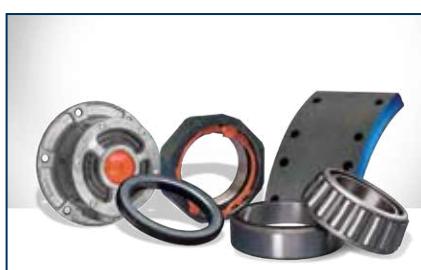

LOCK IT IN

B-Lock™ is a patented rust-preventative technology that eliminates any possibility of early deterioration of the brake shoe table. STEMCO guarantees our new brake shoes using Rome Steel and B-Lock assembled in Rome, GA, against rust jacking for the life of the original STEMCO lining. If B-Lock should fail, the brake shoe assembly will be replaced at our cost.

PLATINUM-LEVEL PERFORMANCE

If STEMCO new or relined brake shoes are used in conjunction with the Platinum Performance System™, lined shoes that have been exposed to oil contamination will be covered or replaced. For STEMCO brakes not covered by PPS, the length of the lining warranty against oil contamination will be the warranty period of the STEMCO seal. Horizon SP® brake linings are excluded from oil contamination coverage.

Note: Table is for reference purposes only. For proper brake lining application, variables such as actual vehicle weight and A/L factor must be considered.

GET THE FULL LIFE OUT OF STEMCO BRAKE LININGS WITH B-LOCK™

B-Lock is a patented rust preventative technology that eliminates any possibility of early deterioration of the brake shoe table. B-Lock is applied to the brake shoe table in an adhesive tape form before the shoe is lined. Once the lining is riveted to the B-Lock core, a cold bond is formed between the table of the shoe and the lining.

How is B-Lock cured?

B-Lock forms an epoxy bond and a barrier between the shoe table and the lining with the initial application of the brakes. This eliminates the gap between the two, which prevents elements such as moisture and salt from getting in between the table and lining.

How does B-Lock secure the lining?

B-Lock along with the riveting of the lining provides total and complete lining security and insures that the integrity of the friction is maintained. B-Lock has proven to work well where braking demands are severe and stress on friction is at the greatest. In such applications, it is not uncommon for lining to react to the stress with cracking

in the surface. Because B-Lock secures the entire friction area, such cracks will not impair the performance or durability of the lining.

Can B-Lock reduce noise?

B-Lock has been proven to reduce brake noise and vibration especially in industrial applications. This benefit is a result of the bond between the lining and the table.

Is B-Lock guaranteed?

STEMCO LP guarantees our new brake shoes using Rome Steel and B-Lock assembled in Rome, GA against 'Rust Jacking' for the life of the original STEMCO lining. If B-Lock should fail, the brake shoe assembly will be replaced at our cost.

STEMCO CREWSON™ AUTOMATIC BRAKE ADJUSTER

ELIMINATE GUESSWORK WITH
PATENTED AUTO-CHECK™

STEMCO CREWSON™ AUTOMATIC BRAKE ADJUSTERS

Reduce time spent under trucks and increase safety with STEMCO Crewson™ Brake Adjusters. Designed with safety and convenience in mind, they maintain proper shoe-to-drum clearance in all braking modes and can easily be installed in the field or on the shop floor.

With STEMCO Crewson Brake Adjusters, making sure trucks are up to code and operate safely is easy. Our brake adjusters have been designed with a variety of patented features including:

- **Auto-Check™:** This patented feature allows for one to check air chamber stroke without crawling under the truck.
- **Cam Guard:** This lubrication system eliminates seizing and corrosion between the S-Cam and ABA.
- **Patented Installation Template:** This handy guide ensures the ABA is installed correctly every time.
- **Patented Clearance-Sensing Adjuster System:** STEMCO Crewson features the only patented reduced-wear clutch in the industry.
- **High-Strength Gearset:** Assures the ABA will stand up to years of service in demanding conditions.
- **Blue Powder Coat:** Protects the ABA from harsh winter conditions.
- **Sealing:** The gear is sealed with a proprietary system that protects it from environmental contamination.
- **Patented Pushrod Cutoff Tool:** For accurate measurements.

INSTALLATION

The STEMCO Crewson Automatic Brake Adjuster comes with our patented, structurally rigid installation guide. This handy and fool-proof guide ensures that even first-time users can install the ABA correctly every time.

AUTO-CHECK

Our patented Auto-Check option is designed to provide a method of checking the air chamber stroke without going under the truck.

- Installed on the ABA facing the center of the vehicle to easily see if brake stroke is in an acceptable range.
- Bright yellow pointer easily indicates set-up position, indicates working stroke and shows if brake stroke is past acceptable limit without crawling under the vehicle.
- Offers an extra quality-control check.

Installation Guide

Detail of Auto-Check™ Feature

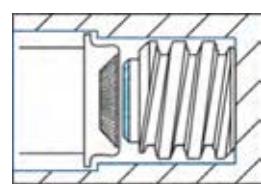

Figure A shows components disengaged to reduce wear (over 90% of the time).

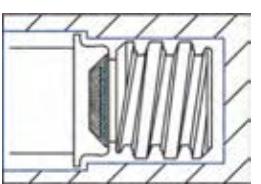

Figure B shows components engaged during brake adjustment (less than 10% of the time).

LONG-LIFE ADJUSTMENT SYSTEM

Heavy-duty internal components with a clearance-sensing clutch enables the brake system to adjust for hot braking conditions. This patented STEMCO Crewson design protects the adjusting components during normal brake applications when brake adjustment is not required. Over 90% of all brake applications do not require adjustment, so why subject the adjusting components to continuous wear?

The STEMCO Crewson Adjustment System operates like the windshield wipers on a car — it is utilized only when needed, not continuously when the car is running.

- A typical highway vehicle makes about two million brake applications in five years.
- This same vehicle will require the ABA to adjust the brake about 3,000 times.

To convert non auto-check to auto-check:

- Change the first number from a (2) to (3) for chamber type 16, 20, 24 STD – 1.75 limit.
- Change the first number from a (2) to (4) for chamber type 16, 20, 24 LS, 30 STD – 2.00 limit and for chamber type 24 LLS, 30 LS – 2.5 limit.

STEMCO CREWSON PART NUMBERS

Unlike other manufacturers, determining what part is needed can be done by gathering the following information.

(MK) ALL AFTERMARKET PART NUMBERS

(A) AUTO-CHECK™ STROKE INDICATOR

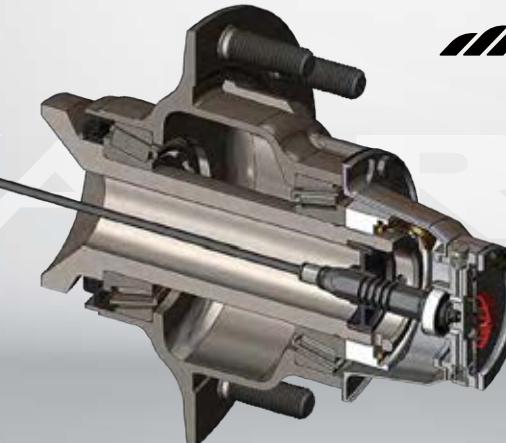

- (2) No "Auto-Check" Indicator
- (3) T-16, 20, 24 Std. Stroke Chamber
- (4) T-30 Std. Stroke or T-16 LS, 20 LS Chamber, 24 LS Chamber and T-24 LLS, 30 Long Stroke Chamber

(B) SPLINE (Diameter - Splines)

- (1) 1-1/2" – 10
- (2) 1-1/2" – 28
- (3) 1-5/8" – 37
- (4) 1-1/4" – 10
- (5) 1-1/4" – 24

(C) CLEVIS OPTION

- (0) No Clevis
- (1) 5/8" – 18 Straight
- (2) 1/2" – 20 Straight
- (3) 5/8" – 18 Offset
- (4) 1/2" – 20 Offset
- (7) 5/8" – 18 Straight Extended
- (8) 5/8" – 18 Short Throat
- (9) 5/8" – 18 Short Throat 5/8" Offset
- (E) 1/2" – 20 Straight Extended

**AERIS®**

NEVER WORRY ABOUT TIRE PRESSURE AGAIN

Aeris® by STEMCO is a high performance automatic tire inflation system that will keep vehicles on the road while maximizing fuel economy and minimizing tread wear. The patented sealing system is designed for long life and low maintenance, and will not compromise the life of wheel end components by pressurizing the wheel end.

Saves Fuel and Extends Tire Life

Keeping tires at optimum pressure levels reduces friction that shortens tire life, consumes more fuel and puts extra strain on the engine.

Superior Reliability and Durability

Keeps trucks on the road longer. Patented sealing system is designed for long life and low maintenance.

Does Not Pressurize Wheel End

Will not compromise the integrity and life of wheel end components by pressurizing the wheel end.

Fits Single, Tandem and Tri-axle Configurations

Versatile design allows implementation across entire fleet.

Mechanic- and DOT-friendly

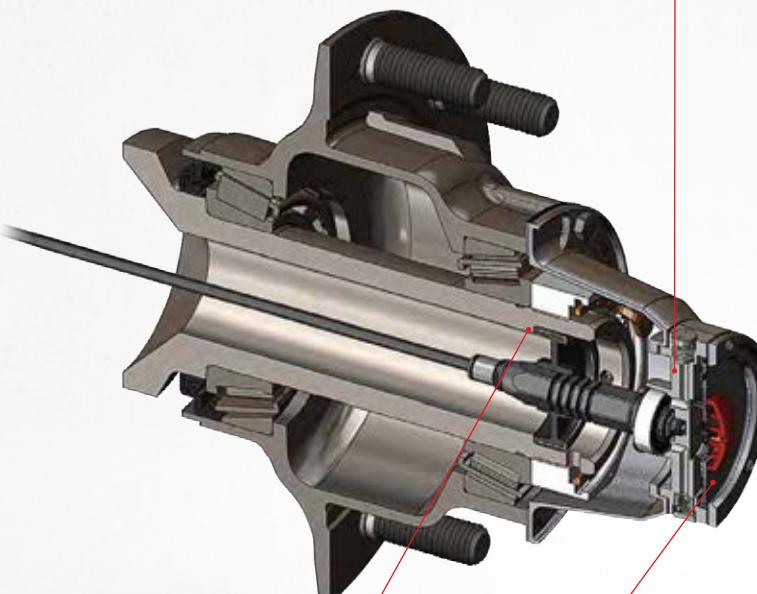

Easy to service and compliant with governmental regulations.

OPTIMAL TIRE PRESSURE. MILE AFTER MILE.

Patented Air Seal

- Rugged and reliable face seal
- Long life
- Low maintenance

Flexible Torque Shaft

- Isolates bearing and air seal from vibration
- Simplifies assembly for routine maintenance

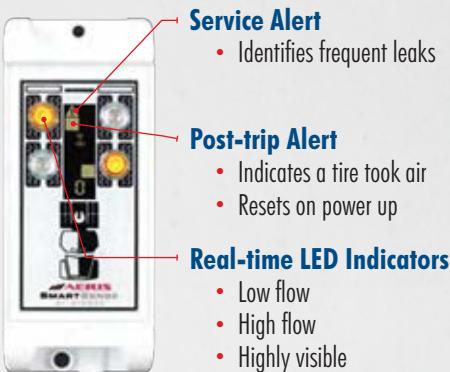

Integrated Sentinel

- Proven technology
- Blocks moisture

SmartSense® Tire Monitoring System

- Reduce time spent identifying low tires
- Identify problem tires to both driver and mechanic – even without power
- Reduce retrofit installation times
- Monitors wheel ends continuously

Upgrade Aeris with the SmartSense tire monitoring system to diagnose problem tires faster with highly visible, real-time feedback to drivers about the condition of their tires. It even monitors and provides feedback when the trailer is parked in the yard and without power.

Service Alert

- Identifies frequent leaks

Post-trip Alert

- Indicates a tire took air
- Resets on power up

Real-time LED Indicators

- Low flow
- High flow
- Highly visible

Platinum Performance Plus System™

- Aeris Automatic Tire Inflation System
- Guardian® HP or Discover® Seal
- Pro-Torq® Axle Fastener
- Sentinel® Hub Cap
- STEMCO® Bearings

Combine Aeris with our Platinum Performance Plus System and get an industry-best, 7-year parts and labor warranty on the entire package. Contact participating trailer dealers or a STEMCO sales manager to find out more about this outstanding package!

VanFastic™ | FLEXAN™

BEFORE REPAIR

AFTER VANFASTIC REPAIR

THE BEST REPAIRS ARE THE ONES THAT NEVER GET NOTICED.

Designed for a range of van and truck trailers, refrigerated trailers and liners, cargo containers and more, STEMCO® VanFastic™ and FLEXAN™ cut repair costs by as much as 90%—and they deliver exceptional end results that look good and last longer. Plus, they form over just about any contour, making repairs quick and easy.

VANFASTIC

Designed for steel and aluminum repairs, VanFastic offers reinforced protection on aluminum applications and high abrasion and corrosion resistance for steel applications.

Applications include:

- Aluminum van type trailers or truck van type bodies
- Refrigerated trailers
- Aluminum roof repairs
- Steel containers
- Soft side or curtain side trailers

Repairs Made Easy

Simple peel-and-stick application eliminates the use of fasteners and requires no special skills or tools.

FLEXAN

Designed to repair everything from FPR panels and refrigerator liners, roof light panels, and see-through cargo containers, FLEXAN highly durable polycarbonate material also shatterproofs windows and repairs any color tarpaulins and truck or bus seats.

A Better, Stronger Seal

VanFastic and Flexan provide waterproof and airtight seals that offer better, more durable protection.

COLORS AVAILABLE IN VANFASTIC™

ALUMINUM

Repairs trailer panels and roofs. *Ask about special colors.

WHITE

NATURAL

GRAY

STEEL

Repairs refrigerated container liners. Provides high abrasion protection and corrosion resistance.

STAINLESS

PREPRIMED

WHITE

TRANSLUCENT

CLEAR

VINYL

Repairs FPR panels and refrigerator trailer liners. Will also form to corrugated aluminum panels.

Repairs roof light panels.

Repairs see-through cargo containers; reinforces and shatterproof windows.

Repairs any color tarpaulins, side curtains, bus and truck seats.
*Ask about special colors.

AERIS® AXLE PREPARATION INSTRUCTIONS

RECOMMENDED TOOL LIST

1/2" Drill

Drill Speed Recommendations (typical 1/2" electric drill is 550 rpm)

- Drill Speed 7/16" drill...262 rpm to 786 rpm
- Drill Speed 5/16" drill...367 rpm to 1100 rpm

Drill Bushings (Type SF) 5/16", 7/16" and 9/16"

Drill Bits 5/16" and 7/16"

1/4-18 NPT Tap

HOSE INSTALLATION

Step 1

Thread the nut, grommet and pass through fitting over the end of the tubing as shown in **FIGURE A** and then place the supplied plastic hose cap (red) over the end of the air tubing to guard against debris entering the tubing as it is being inserted into the axle toward the spindle opening.

Step 2

Route the air tubing through the hole in the axle tube and help feed it toward the end of the axle until 6–8" of tubing extends beyond the end of the spindle. Make sure the tubing doesn't have any kinks that would block the flow of air.

Step 3

Now install the pass-through fitting into the outer most tapped (1/4" NPT) hole on the axle and tighten the base fitting into the axle. Now hand-tighten the nut and grommet onto the fittings as shown in **FIGURE D**.

Step 4

Repeat procedure on other end of axle. Make sure when feeding tubing into axle it heads toward the desired end of the axle.

PROTECTIVE SLEEVE INSTALLATION

Step 1

Slide the 18" piece of nylon convoluted sleeve (shown in **FIGURE C**) over the air tube in each end of the axle to protect against sharp edges inside the axle bore.

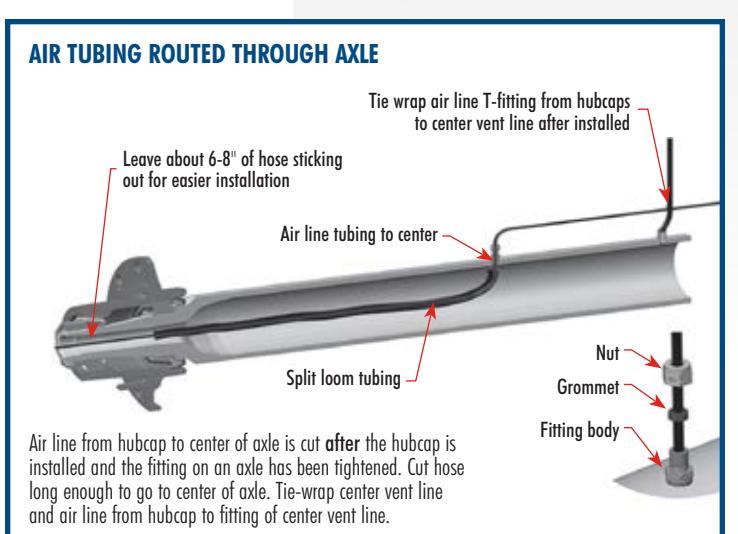

AXLE VENT FITTING INSTALLATION

Step 1

Install the push-connect fitting (1/4" NPT X 3/8" tube) into the tapped hole at the center of the axle and tighten (shown in **FIGURE D**).

Step 2

Install the plastic protective cap over the axle vent fitting (supplied).

AERIS® AXLE PREPARATION INSTRUCTIONS

AXLE PLUG INSTALLATION

Step 1

The axle plug is installed using the axle plug installation tool supplied by STEMCO. The tube is routed through the center of the axle plug which is then inserted through the slot on the installation tool.

Step 2

Align the axle plug with the axle spindle hole and push the axle plug into the spindle bore.

Step 3

Place the face of the installation tool against the axle plug and hammer gently on the handle of the installation tool and seat the axle plug flush with the spindle end. Be careful to drive the axle plug in as straight and even as possible to prevent misalignment.

Step 4

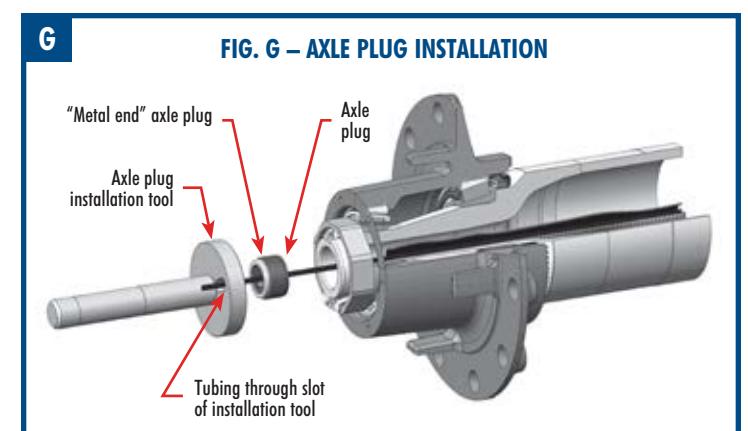

Repeat this step on the other end of the axle. Gear lubricant may be used on the O.D. of the plug to aid installation.

Step 5

Secure the hose end outside of the axle plug to prevent it from retracting into the axle during shipment to the destination OEM. Ensure that the tubing ends are still securely covered with tape (from Step 2) to prevent debris from entering the tube.

PRE-PREP KIT NUMBERS ARE:

- "N" spindle axles use A000030
- "P" spindle axles use A000060

CREWSON™ AUTOMATIC BRAKE ADJUSTER INSTALLATION INSTRUCTIONS

INSTALLATION INSTRUCTIONS

PRIOR TO INSTALLATION

Step 1

Check the vehicle wheels. (Block all the wheels to prevent the vehicle from rolling and avoid injury.)

Step 2

Check all foundation brakes. Brake adjusters cannot compensate for problems with foundation brakes. Replace any worn cam bushing, pins, rollers and brake shoes, or broken return springs.

Step 3

Fully cage the spring brake by following the manufacturer's recommended procedures.

CAUTION: Some mechanical caging devices do not fully cage the spring brake. STEMCO Crewson recommends using air at 90 – 100 psi to fully cage the brake spring.

ABA INSTALLATION

Step 1

Remove the existing brake adjuster and clevis. Keep the existing mounting hardware. Do not remove the clevis jam nut.

Step 2

Thread the STEMCO Crewson clevis on to the push rod and install the 1/2" clevis pin into the clevis. Do not tighten jam nut. (See **FIGURE A**)

NOTE: Do not use the old clevis or a competitor's clevis. In order to guarantee proper set up, one must use the new STEMCO Crewson clevis and template provided in the kit.

Step 3

Slide the installation template over the S-cam spline, swing the template into the clevis until the appropriate slot totally engages the 1/2" clevis pin. (See **FIGURE B**)

Step 4

Once the template has been swung into place, install the 1/4" clevis pin. If the 1/4" clevis pin does not slide freely into the clevis and template, remove the template from the clevis. Follow these instructions: (See **FIGURE C**)

- If the 1/4" template hole sits below the 1/4" clevis hole, rotate the clevis CW until the holes align.
- If the 1/4" template hole sits above the 1/4" clevis hole, rotate the clevis CCW until the holes align.
- If the push rod threads extend through the clevis more than 1/16", remove clevis and cut rod to length.
- A minimum of 1/2" of push rod engagement in the clevis body is required. If this is not the case, install a new push rod and cut rod to length, or use a STEMCO Crewson extended clevis.
- When installing a new chamber or pushrod, use Stemco Crewson's pushrod tool (Part # 195-1001), to accurately cut the pushrod to the correct length. (See **FIGURE D**)
- Remove template and both clevis pins.

INSTALL THE ABA ONTO THE S-CAM

Step 1

Before installing the ABA, apply anti-seize on the S-cam splines. Install the ABA onto the camshaft using the original mounting hardware. Properly shim the ABA.

Place other washers as needed on the end of the camshaft on the outside of the ABA. Re-attach the retaining clip. (See **FIGURE E**)

Step 2

Tighten jam nut to 50 ft-lbs torque minimum.

CREWSON™ AUTOMATIC BRAKE ADJUSTER INSTALLATION INSTRUCTIONS

INSTALL THE ABA ONTO THE S-CAM CONTINUED

Step 3

Use a 7/16" wrench, manually rotate the adjuster shaft CW until the ABA arm holes align with the clevis holes.

Step 4

If the adjuster is equipped with "Auto-Check" stroke indicator, do the following:

- A. Insert the 1/2" clevis pin into the yellow "Auto-Check" pointer hole. Be sure to use the correct set of holes in the pointer for the ABA being installed. The clevis pin's head should face the front of "Auto-Check". (See **FIGURE F**)
- B. "Auto-Check" is non-handed and can be installed on either the right or left side of the ABA. "Auto-Check" is designed to face the center of the vehicle.
- C. Now insert the 1/4" clevis pin with the "Auto-Check" pointer into the clevis and install the cotter pins.

Step 5

If the adjuster is not equipped with "Auto-Check" simply install the pins.

Step 6

Use a 7/16" wrench, manually rotate the adjuster CW until the brake linings contact the drum. Now back off 1/2 turn CCW to set the clearance. (See **FIGURE G**)

WARNING: If brakes are applied before this step, it will cause damage to the ABA.

Step 7

Uncage the spring brake.

Step 8

Build up the vehicle air pressure to 90-100 psi.

Step 9

The "Auto-Check" pointer will now point to the "home" location on the housing. (See **FIGURE H**)
If it does not point to the home position, remove the ABA and reinstall (see page 1 #3).

Step 10

Measure the distance from the air chamber to the center of the 1/2" pin. Fully apply the brakes with 90-100 psi air pressure and re-measure the distance to the 1/2" pin. (See **FIGURE I**)

Step 11

The stroke (difference of these two measurements) must be less than those in the chart below. (See **FIGURE J**)

Step 12

Fully apply and release the brakes several times to check for adequate clearance to all the adjacent components.

MAINTENANCE: The ABA should be greased every 6 months or 50,000 miles using a quality NLGI #2 Moly EP Multi Purpose grease as part of the regular equipment maintenance schedule.

WARNING: Excessive pushrod stroke or tight running brakes indicates that there is a problem with the foundation brake components, the ABA installation, or the ABA. The proper way of checking an ABA to see if it is working within specs is to measure the pushrod stroke. The only time the ABA should be manually adjusted is during installation or at reline. Constant manual adjustment of the ABA is a dangerous practice and may lead to reduced internal component life, or have other more serious consequences.

STEMCO
CREWSON™

DATATRAC® PRO INSTALLATION INSTRUCTIONS

HOW IT WORKS

DataTrac Pro is an advanced mileage counter that relies on Earth's gravity for counting wheel revolutions. The DataTrac Pro unit monitors its orientation to Earth's gravitational pull and uses this reference to recognize and count revolutions.

PROGRAMMING THE UNIT

DISTRIBUTION OR END USER WITH A PROGRAMMER

The unit is shipped from the factory with a Revs/Mile value of zero. Dashes (---) on the display indicate that the unit has NOT been programmed. It MUST be programmed before it is installed on a wheel end (The DataTrac Pro distributor should have a programmer or can sell a programmer).

THE PROGRAMMER CAN SET THE DATATRAC PROS:

Step 1

The Revolutions/Mile (or per Km)

Use Stemco's catalog to determine the Revolutions/Mile for each Tire Make/Model.

Step 2

Distance Unit of Measure

Miles or Km (Life miles only or including Trip Miles)

Step 3

Mileage Preset

Set the mileage to match the current mileage of the vehicle the unit will be mounted to.

When programming is complete, (as indicated on the programmer screen) immediately lift the DataTrac PRO up and confirm the display shows the correct Tire Revolutions (shown as "REV###" on the screen). If not, repeat the programming.

The DataTrac Pro can be programmed/reprogrammed as many times as desired until there is approximately 2 miles on the unit.

INSTALLING THE UNIT

Install the DataTrac PRO unit using the appropriate STEMCO bracket and hardware. The nut furnished with the unit is a locking nut and must NOT be torqued over 15-ft lbs.

READING THE DISPLAY

The display will turn on when the vehicle is at rest. Numbers will automatically orient to read upright. This is also indicated by the icon display, e.g. mile, km, acre. The mileage reading is always in the same direction as the icon.

In order to conserve power the display turns off at any time a vibration is detected. This means that the display will be off while the vehicle is moving. As soon as all vibration or motion stops the display will reactivate in about 5 seconds.

DISPLAY MODES

The DataTrac Pro unit comes equipped with three display modes: LIFE and TRIP (if programmed), and REV. To toggle the display between LIFE, TRIP and REV Modes, cover the round bubble on the face of the unit for at least 1 second, and then uncover it. If the unit is in bright sunlight, the bubble may have to be covered to block more light from reaching the sensor. TRIP mode is displayed with tenths resolution and is indicated by display of the TRIP icon (only if unit is programmed for TRIP).

To reset the TRIP display, toggle between LIFE, TRIP and REV Modes 5 times, quickly. Note that the unit cannot toggle faster than every 1.5 seconds. To view the revolutions of the unit simply repeat the process that is used to view trip and then a screen that shows (REV XXX) will show up. The XXX is the number of revolutions per KM or MILE that the unit is programmed for. On units without TRIP there are only two screens, all others have three screens (LIFE, TRIP, and REV). As with the TRIP mode the unit will return to the mileage after 10 seconds if left in the revolutions screen.

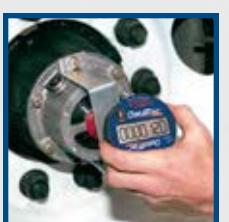

CERTIFICATIONS

This unit complies with European EMI (CE) regulations as noted on front cover by the E11 marking.

PRODUCT LIMITATIONS

This unit should not be used as a rotating shaft counter for machinery, unless the machine shaft rotates slower than 1250 RPM and has a slow acceleration profile similar to a wheel end. At all times the unit should rotate about an axis perpendicular to gravitational forces.

This unit contains a Lithium-Thionyl Chloride battery and should be disposed of according to local regulations. The battery contains less than 1 gram of lithium and is therefore classified as a non-hazardous product. Lithium-Thionyl Chloride batteries contain no poisonous materials and do not present environmental hazards when properly disposed of.

Install DataTrac Pro on wheel end.

Display turns on when the vehicle is at rest.

Display turns off when vibration is detected (vehicle moving) to conserve energy.

LIFE mode shows mileage without tenths.

TRIP mode shows mileage with tenths and TRIP icon.

REV Mode shows RPM or RPK unit Programmed for.

HUB CAP TORQ SPECS

THREADED HUB CAPS	
XXX-4075	100 ft/lbs
340-4975	50-60 ft/lbs
340-4976	50-60 ft/lbs
640-0003	50-60 ft/lbs

HUB CAP COMPONENTS		
359-6032	#8 Torx Screw	18-23 in/lbs
359-5984	3/8" Mag Plug	5-9 ft/lbs
359-5985	3/8" Pipe Plug	5-9 ft/lbs

HUB CAP MOUNTING BOLTS			
1/4"	8-12 ft/lbs	5/8"	22-26 ft/lbs
5/16"	12-16 ft/lbs	3/4"	24-28 ft/lbs
3/8"	16-20 ft/lbs	7/8"	26-30 ft/lbs
7/16"	18-22 ft/lbs	6MM	8-12 ft/lbs
1/2"	20-24 ft/lbs	8.5MM	12-16 ft/lbs

HUB CAP INSTALLATION INSTRUCTIONS

HUB CAP INSTALLATION

Step 1

Check the mounting surface of the hub, making sure to clean off old gaskets and sealant. Also, check for any burrs or imperfections that might prevent a proper gasket seal.

Step 2

Make sure all components are free of any dirt or grit.

Step 3

Always install the hub cap with a new gasket

Step 4

Split washers are recommended to lock the flange bolts in place.

Step 5

Initially hand tighten the hub cap and lastly torque to the recommended specification (refer to chart at left).

Step 6

For oil applications, fill to recommended level and re-check after the lube has had adequate time to establish its final level.

TROUBLESHOOTING GUIDE

PROBLEM	POSSIBLE SOURCES OR CAUSES
Water Contaminated/Milky Oil	High pressure washing, flooded loading docks (Note: See Oil Crack Test on Page 13).
Bulged/Melted Windows	Check for low lube level, high heat caused from improperly adjusted bearings, high heat caused from improperly adjusted brakes.
Leaking Gaskets	Improper torque of flange bolts, gouged mounting surface (hub cap flange/hub face) no gasket, reuse of gasket.
Leakage from Red Fill Plug	Make sure the oil level is not in an overfilled condition, and check the vent hole to make certain it is not plugged. High heat and resulting pressure may also contribute to leakage.

STANDARD / GRIT GUARD® SEAL INSTALLATION INSTRUCTIONS

Step 1

Remove all burrs and thoroughly clean the spindle. Apply a thin layer of No. 2 sealant to the O.D. of the spindle shoulder. Place the axle ring on the spindle.

Step 2

Using the recommended STEMCO Universal Axle Tool, drive the axle ring on until the tool bottoms against the spindle shoulder. Make certain the axle ring is flush with the shoulder. Wipe away any excess sealant. (See **FIGURE A**)

Step 3

Remove all burrs from the hub bore and thoroughly clean the entire wheel cavity.

Step 4

With the wheel in the horizontal position, pre-lube the inner bearing and place it into the bearing cup. (See **FIGURE B**)

NOTE: When using grease, pre-pack the outer bearing before placement into the hub.

Step 5

Apply a thin layer of No. 2 sealant to the O.D. of the seal and position the seal in the hub. Using the recommended STEMCO Universal Hub Tool, held in a vertical position, drive the seal into the seal bore until it is bottomed out. Check the clearance between the bearing cone and seal (at least 1/32nd is required). (See **FIGURE C**)

Step 6

With the wheel mounted on a dolly, carefully align the bore with the spindle. Gently push the wheel assembly onto the spindle to the proper position. Pre-lube the outer bearing and push it into the bearing cup. (See **FIGURE D**)

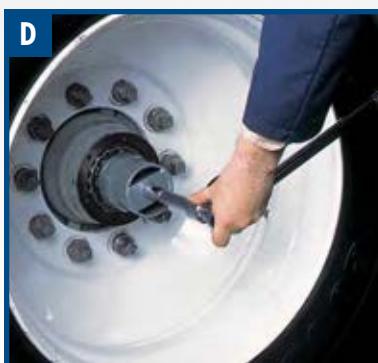

NOTE: When using grease, pre-pack the inner bearing before placement into the hub.

Step 7

Assemble the inner nut and tighten it to 200 ft. lbs. Rotate the wheel several times then back off nut one full turn. Make final bearing adjustment, according to TMC recommended bearing adjustment procedure. Install the appropriate axle fastener.

Step 8

Install the hub cap with the new gasket and fill the cavity with lubricant to the proper level. On drive axles be sure the differential oil is high enough (manufacturer's recommended level) to ensure oil flow through the tube to the wheels. It is recommended to jack one side up and then the other until flow starts. Make certain the breather plug is clear. Recheck steers and trailers to ensure proper fill levels.

GUARDIAN® / GUARDIAN® HP INSTALLATION INSTRUCTIONS

Step 1

Remove all burrs from the hub bore and spindle. Thoroughly clean the entire wheel cavity. Apply a thin layer of No. 2 sealant to the O.D. of the spindle shoulder. Place the seal assembly on the spindle so the words "OIL BEARING SIDE" are exposed to the oil. (See **FIGURE A**)

WARNING: DO NOT INSTALL THE SEAL INTO THE HUB BORE.

Step 2

Using the recommended STEMCO Universal Axle Tool, drive the seal assembly on until the tool bottoms against the shoulder. (See **FIGURE B**) Make sure the ring is flush with the axle shoulder. Ensure seal fully contacts the wear ring flange. Wipe away any excess sealant.

Step 3

Dip the inner bearing in oil and place on the spindle.

NOTE: The O.D. of the seal must be coated with a thin coat of lubricant.

NOTE: When using grease, pre-pack the inner bearing before placement into the hub.

Step 4

With the wheel mounted on a wheel dolly, carefully push the wheel onto the spindle until it contacts the seal. (See **FIGURE C**) Dip the outer bearing in oil and place it on the spindle.

NOTE: When using grease, pre-pack the outer bearing before placement into the hub. Tighten the inner spindle nut hand tight and remove the wheel dolly.

Step 5

Tighten the inner nut to 200 ft. lbs. Rotate the wheel several times then back off nut one full turn. Make final bearing adjustment, according to TMC recommended bearing adjustment procedure. Install the appropriate axle fastener. (See **FIGURE D**)

Step 6

Install the hub cap with a new gasket and fill the cavity with lubricant to the proper level. On drive axles be sure the differential oil is high enough (manufacturer's recommended level) to ensure oil flow through the tube to the wheels. It is recommended to jack one side up and then the other until flow starts. Make certain the breather plug is clear. Recheck steers and trailers to ensure proper fill levels.

GRIT GUARD®

**Guardian®
HP**

VOYAGER® / DISCOVER® INSTALLATION INSTRUCTIONS

Step 1

Remove all burrs from hub bore and spindle. Thoroughly clean hub cavity and spindle.

NOTE: Do not apply a sealant to the spindle shoulder. Apply a light coat of lubricant to spindle surfaces.

Step 2

With the wheel in horizontal position, pre-lube the inner bearing and place it into the bearing cup. (See **FIGURE A**)

NOTE: When using grease, pre-pack the inner bearing before placement into the hub.

Step 3

Place the seal on the recommended STEMCO Installation Tool, with the correct head, so that the words "Air Side" face into the tool. Place the tool (with the seal correctly mounted in the tool head) over the hub bore. Use a heavy hammer to drive against the end of the tool. Drive seal into bore until complete bottoming is assured. Remove Tool. Apply a thin layer of lubricant on the I.D. surface of the seal. (See **FIGURE B**)

NOTE: Do not apply lubricant to the O.D. of the seal.

Step 4

With the wheel mounted on a dolly, carefully align the bore with the spindle. Gently push the wheel assembly onto the spindle to the proper position. Fill the hub cavity with lubricant until it runs over the outer bearing cup. Coat the outer bearing with lubricant and place it on the spindle and into the bearing cup. (See **FIGURE C**)

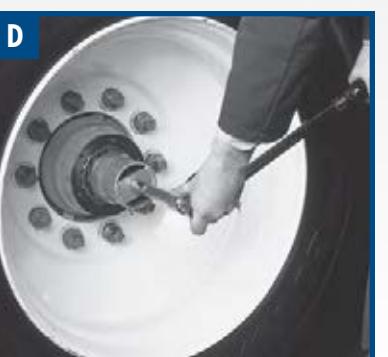

NOTE: When using grease, pre-pack the outer bearing before placement into the hub.

NOTE: Support the hub with the lifting device until the outer bearing and wheel-end fastener have been installed to a hand tight condition to prevent cocking of the hub/seal.

Step 5

Assemble the inner nut and tighten it to 200 ft. lbs. Rotate the wheel several times then back off nut one full turn. Make final bearing adjustment according to TMC recommended bearing adjustment procedure. Install the appropriate axle fastener. (See **FIGURE D**)

Step 6

Install hub cap with new gasket, and fill cavity with the desired lubricant to the proper level. On drive axles be sure the differential oil is high enough (manufacturer's recommended level) to ensure oil flow through the tube to the wheels. It is recommended to jack one side up and then the other until flow starts. Make certain the breather plug is clear. Recheck steers and trailers to ensure proper fill levels.

Voyager®

Discover®

UNITIZED PINION SEAL INSTALLATION INSTRUCTIONS

Step 1

Remove yoke. (See **FIGURE A**)

Step 2

Remove old seal and wear ring (if applicable). (See **FIGURE B**)

Step 3

Remove all burrs and thoroughly clean cage bore. (See **FIGURE C**)

NOTE: If installing the seal into a worn cage bore, apply a thin layer of No. 2 sealant to the OD of the seal before installation.

Step 4

Align installation tool with the seal and spline as shown. Hand tighten bolt/nut. (See **FIGURE D**)

Step 5

Tighten until the seal flange bottoms into the cage -or- installation tool bottoms into cage (non-flange seals). Take care not to overtighten bolt/nut. (See **FIGURE E**)

Step 6

Remove burrs and thoroughly clean yoke. Lube the seal ID. Install yoke as shown. (See **FIGURE F**)

Step 7

Refer to axle manufacturer for yoke assembly torque requirements. (See **FIGURE G**)

TRIFECTA™ PRE-ADJUSTED HUB ASSEMBLY INSTALLATION INSTRUCTIONS

Follow the installation procedure and experience the safety, performance and confidence of having the Trifecta™ Pre-Adjusted Hub Assembly. By combining premiere STEMCO® wheel end technologies with the trusted Webb® hub in a single, pre-adjusted assembly, installation is faster and more secure. Plus, there is no need to purchase, install and adjust separate wheel end components and fasteners.

TOOLS NEEDED FOR INSTALLATION

- Torque wrench
- Sockets for all applications
- Towel and/or emery cloth to clean spindle

Step 1

To begin the Trifecta installation, start by cleaning the spindle and removing all burrs.

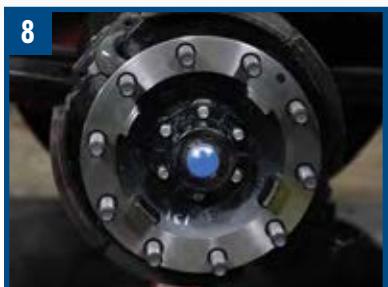

Step 2

Apply a light coat of lubricant to the spindle surfaces.

NOTE: The Discover® XR seal includes STEMCO's patented GlideLock™ technology, eliminating the requirement for seal ID pre-lubrication.

Step 3

Align the Trifecta assembly with the keyway and slide the hub on to the spindle.

TRIFECTA™ PRE-ADJUSTED HUB ASSEMBLY INSTALLATION INSTRUCTIONS

Step 4

Rotate the hub clockwise to engage the Zip-Torq® axle fastener and continue rotating manually until it stops.

Step 5

Unscrew and remove the axle fastener retainer.

Step 6

Use a torque wrench to tighten Zip-Torq to 200 ft./lb. Rotate the hub one full rotation. Repeat this procedure two more times. Torque spec is the same for steer, drive and trailer applications.

FOR APPLICATIONS REQUIRING HUBCAPS

Step 7

To complete installation, install the Defender ESP™ hubcap. Torque the hub cap bolts to 12 to 16-foot pounds using a star pattern sequence. Add oil to the fill line on hub cap window.

Step 8

Reinstall the plug.

PRO-TORQ® INSTALLATION INSTRUCTIONS

Step 1

Remove the Keeper From the Nut

Use a small screwdriver to carefully pry the keeper arm from the undercut groove on each side until the keeper is released.

Step 2

Thread the Nut Onto the Axle

Thread the nut onto the axle until hand tight against the bearing.

Step 3

Seat the Bearing

With wheel hub assembly:

- Using a torque wrench:
 - Tighten the nut to 200 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - Tighten the nut to 200 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - Tighten the nut to 200 ft-lb. Spin the wheel hub assembly at least one full rotation.
- Back the nut off one full rotation.

Step 4

Adjust the Bearing

With wheel hub assembly:

- Using a torque wrench:
 - Tighten the nut to 100 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - Tighten the nut to 100 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - Tighten the nut to 100 ft-lb. Spin the wheel hub assembly at least one full rotation.
- Back the nut off one face mark (according to chart).

Step 5

Install the Keeper

Orange side facing out:

- Insert the keeper tab into the undercut groove of the nut and engage the keyway tang in the axle keyway. Insert keeper tab with the orange side facing out.
- Engage the mating teeth.
- Compress and insert the keeper arms, one at a time, into the undercut groove with a screwdriver.

For Steering Spindle Nut:

- 448-4836, 448-4839, 448-4840, 448-4863, 448-4864, and 448-4865
- Align the flat of the keeper with the milled flat on the spindle and insert the single keeper tab into the undercut groove of the nut. Insert keeper tab with the orange side facing out.
 - Engage the mating teeth.
 - Compress and insert the keeper arms, one at a time, into the undercut groove with a screwdriver.

NOTE: Recommended practice is to replace the keeper each time the Pro-Torq nut assembly is removed for maintenance purposes.

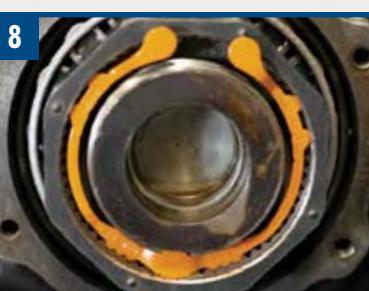

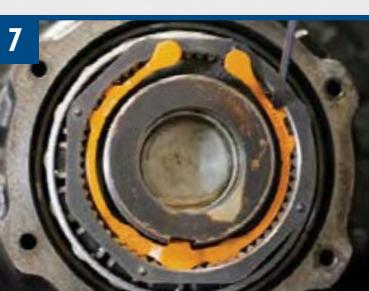

Step 6

If the inner tang does not line up with the keyway, back the nut off slightly until it does. Using a small screwdriver, compress and insert the keeper arms, one at a time, into the undercut groove. The orange painted side of the keeper must be facing out.

Step 7

Inspect the Installation

Failure to follow this instruction could cause the wheel to come off and cause bodily injury. Make sure that the keeper tab and keeper arms are fully seated into the undercut groove.

PRO-TORQ® INSTALLATION INSTRUCTIONS

Step 8

Inspect keyway tang to insure it does not contact the bottom of the keyway. If contact exists, immediately notify a STEMCO representative.

This procedure will consistently produce a bearing setting of 0.001" to 0.003" end play.

Step 9

Acceptable End Play

The dial indicator should be attached to the hub or brake drum with its magnetic base. Adjust the dial indicator so that its plunger is against the end of the spindle with its line of action approximately parallel to the axis of the spindle.

Grasp the wheel or hub assembly at the 3 o'clock and 9 o'clock positions. Push and pull the wheel-end assembly in and out while oscillating the wheel approximately 45 degrees. Stop oscillating the hub so that the dial indicator tip is in the same position as it was before oscillation began. Read the bearing end-play as the total indicator movement.

*Acceptable end-play is .001" – .005"

For single nut self-locking systems, consult manufacturers' specifications. STEMCO assumes no responsibility for other manufacturers' bearing warranty.

WARNING

Failure to follow this instruction could cause the wheel to come off and cause bodily injury. STEMCO axle fasteners are sold as an assembly with the keeper in place. DO NOT attempt to place the nut on the spindle or tighten or loosen the nut on the spindle while the keeper is installed inside the nut. Doing so may deform the keeper and allow the nut to unthread during operation. Spindle thread damage could also occur, leaving the axle unusable.

DO NOT bend or manipulate keyway tang in any way. Doing so may cause the tang to break off in service. Failure to back off the axle fasteners on non pre-adjusted systems will cause the bearings to run hot and be damaged.

NOTE: Ford application 12,000 lbs. SIFCO Steer Axle requires OEM inner washer to be installed prior to installation of Zip-Torq® nut system.

Do not use power or air tools during installation of Zip-Torq.

Step 1 Thread the Nut Onto the Axle

Thread the nut onto the axle until hand tight.

Step 2 Seat the Bearing

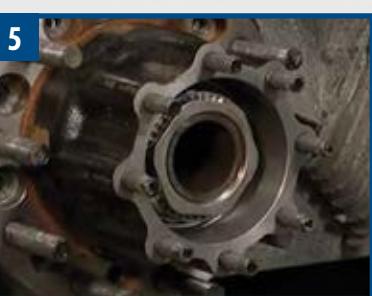

With wheel hub assembly:

- A. Using a torque wrench:
 - (1) Tighten the nut to 200 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - (2) Tighten the nut to 200 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - (3) Tighten the nut to 200 ft-lb. Spin the wheel hub assembly at least one full rotation.
- B. Back the nut off one full rotation.

Step 3 Adjust the Bearing

With wheel hub assembly:

- A. Using a torque wrench:
 - (1) Tighten the nut to 100 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - (2) Tighten the nut to 100 ft-lb. Spin the wheel hub assembly at least one full rotation.
 - (3) Tighten the nut to 100 ft-lb. Spin the wheel hub assembly at least one full rotation.
- B. Back the nut off one face mark (according to chart).

WARNING

Failure to follow this instruction could cause the wheel to come off and cause bodily injury. STEMCO axle fasteners are sold as an assembly with the keeper in place. DO NOT attempt to place the nut on the spindle or tighten or loosen the nut on the spindle while the keeper is installed inside the nut. Doing so may deform the keeper and allow the nut to unthread during operation. Spindle thread damage could also occur, leaving the axle unusable.

DO NOT bend or manipulate keyway tang in any way. Doing so may cause the tang to break off in service. Failure to back off the axle fasteners on non pre-adjusted systems will cause the bearings to run hot and be damaged.

WHEEL BEARING ADJUSTMENT

TMC'S RECOMMENDED WHEEL BEARING ADJUSTMENT PROCEDURE FOR STANDARD SPINDLE NUTS

Proper wheel bearing adjustment is critical to the performance of wheel seals and other related wheel end products. For that reason, we are proud to be a part of TMC's Wheel End Task Force.

We are happy to bring these standards in the form of this technical guide. Working together in this way, STEMCO® helps keep rigs rolling.

The following RP-618A seven-step bearing adjustment recommendation for standard spindle nuts was developed by TMC's Wheel End Task Force. It represents the combined input of manufacturers of wheel end components.

Step 1 Bearing Lubrication

Lubricate the wheel bearing with clean lubricant of the same type used in the axle sump or hub assembly.

Step 2 Initial Adjusting Nut Torque

Tighten the adjusting nut to a torque of 200 ft-lbs. while rotating the wheel.

Step 3 Initial Back-Off

Back the adjusting nut off one full turn.

Step 4 Re-Torque Adjustment

Re-Torque adjusting nut to 50 ft-lbs while rotating the wheel.

Step 5 Final Back Off

AXLE TYPE	THREADS PER INCH	FINAL BACK OFF
Steer (Single Nut)	12	1/6 Turn*
	18	1/4 Turn*
Steer (Double Nut)	14	1/2 Turn
	18	1/2 Turn
Drive	12	1/4 Turn
	16	1/4 Turn
Trailer	12	1/4 Turn
	16	1/4 Turn

*Install cotter pin to lock axle nut in position.

Step 6 Jam Nut Torque

AXLE TYPE	NUT SIZE/TYPE	TORQUE SPECIFICATIONS
Steer (Double Nut)	Less Than 2 5/8"	200-300 ft-lb
	2 5/8" and Over	300-400 ft-lb
Drive	Dowel-Type Washer	300-400 ft-lb
	Tang-Type Washer	200-275 ft-lb
Trailer	2 5/8" and Larger	200-300 ft-lb
	2 5/8" and Over	300-400 ft-lb

Step 7 Acceptable End Play

The dial indicator should be attached to the hub or brake drum with its magnetic base. Adjust the dial indicator so that its plunger is against the end of the spindle with its line of action approximately parallel to the axis of the spindle.

Grasp the wheel or hub assembly at the 3 o'clock and 9 o'clock positions. Push and pull the wheel end assembly in and out while oscillating the wheel approximately 45 degrees. Stop oscillating the hub so that the dial indicator tip is in the same position as it was before oscillation began. Read the bearing end play as the total indicator movement.

Refer to Page 21 of the STEMCO TQM Catalog for measuring end play.

NOTE: Acceptable end play is 0.001"- 0.005".

BEARING REMOVAL AND INSTALLATION

REMOVAL

Step 1

Remove hub/wheel assembly from vehicle in accordance with recommended practices. (See **FIGURE A**)

Step 2

Remove inboard and outboard bearing cones and set aside for inspection.

Step 3

Using a mild steel drift or cup driver, carefully drive out the bearing cups. (See **FIGURE B**)

NOTE: Caution should be used when driving bearing cups, as drifts and other tools can damage bearings.

NOTE: Drifts can damage hub bearing bores. Be careful not to score bores while removing cups, especially when using aluminum hubs.

INSPECTION

Step 1

Inspect the hub bearing bores and shoulders for damage. The bores should be smooth and free from scoring, burrs, indications of cup spinning, or other forms of damage.

Remove any burrs or raised areas using emery cloth, a file, or other appropriate tool. (See **FIGURE C**)

Step 2

Measure the bearing cup bore and compare to manufacturer specifications.

Step 3

Inspect bearing cups and cones for damage. Bearings should be free from chips, contamination, and signs of excessive wear or excessive heat. Refer to bearing damage analysis literature for identifying possible bearing issues.

Step 4

Inspect axle spindle bearing journals for any signs of damage or excessive wear. Remove any raised areas or burrs using emery cloth, a file, or other appropriate tool. (See **FIGURE D**)

Step 5

Journals should be measured and compared with manufacturer specifications.

INSTALLATION

Step 1

Thoroughly clean bearing cups and cones prior to installation. (See **FIGURE E**)

CAUTION: Do not use compressed air to spin bearing rollers as injury may result if cage does not retain the rollers.

Step 2

Lightly coat the outside of bearing cups with oil. (See **FIGURE F**)

Step 3

Using a cup driver, carefully drive bearing cups into hub bearing bores. Be sure to drive cup firmly against cup shoulder in hub. (See **FIGURES G and H**)

If a cup driver is not available, a mild steel drift can be used to install bearing cups.

CAUTION: When driving bearing cups, drifts and other tools can damage bearings.

WARNING: NEVER use a bearing cone to drive a bearing cup. This can damage the bearings and cause premature failure.

Step 4

Use a feeler gauge to check for gaps between cup and shoulder.

Step 5

Inspect the bearing cups to ensure no damage occurred during installation.

Step 6

Lubricate bearing cones according to recommended practices and proceed with installation of wheel assembly.

NOTES

NOTES

WARRANTY

STEMCO warrants to Buyer that all components sold will be free from defects in material and workmanship. This warranty is limited to components installed on vehicles licensed for on-highway use under normal use and service. This warranty extends for a period of one year from the date of manufacture.

The Buyer's exclusive remedy under this warranty shall be the repair or replacement of STEMCO components, but not the cost of removal or installation. STEMCO reserves the right to require that all warranty claim components are available and/or returned for review and evaluation. STEMCO shall not be liable for any claim, whether arising from breach of contract or warranty or claims of negligence or negligent manufacture, in excess of the purchase price. In no event shall STEMCO be liable for special, incidental, indirect, or consequential, or collateral, losses or damages of any kind.

This limited warranty is in lieu of all other warranties or conditions, expressed or implied, including any implied warranty of merchantability or fitness for particular purpose.

This is the only warranty offered by STEMCO and no STEMCO employee or representative is authorized to extend additional warranty terms on behalf of STEMCO.
